Animal Choices

Read the characteristics about each animal. Then, choose an animal to build a smart skin for.

Dolphin

- Heavy (they weigh over 600 lbs!)
- Large, powerful tail
- 1 fin on the top and 2 fins on the side

Pufferfish

- Spines on their skin
- Can inflate to look like a large beach ball (they do this if they see a predator!)

Squid

- 8 Legs
- 2 large eyes
- Skin can change colors

Requirements for Tracking Devices

You will be designing a tracking device for your animal. Read through the requirements before you build your tracking device.

Your device must be/have:

- Light weight
- Glued onto the animal (it shouldn't fall off if the animal moves around!)
- Comfortable for the animal
- A camera to take pictures of where the animal swims and if there are any predators nearby.
