

Layers of Skin

- The epidermis is on the top
- The dermis is the middle layer
- The subcutaneous fat is on the bottom

Epidermis:

- This is the top layer of skin. It is the layer you see with your eyes.
- This layer is very thin. It is also water proof.

Dermis:

- This is the middle layer of skin. This layer helps you sweat. Sweat is very important because it lets your body cool off when you are hot.
- This layer is very tough and hard.

Subcutaneous Fat:

- This is the bottom layer. This layer is made of fat, which keeps our body warm.
- This layer is soft because it stores fat.

Requirements For Your Bandaid

- A button that will light up when bandaid needs to be changed.
- A way to stick to the skin model so it doesn't fall off
- A fun design
