Andre the Agriculturalist: The Best Time to Plant Seeds

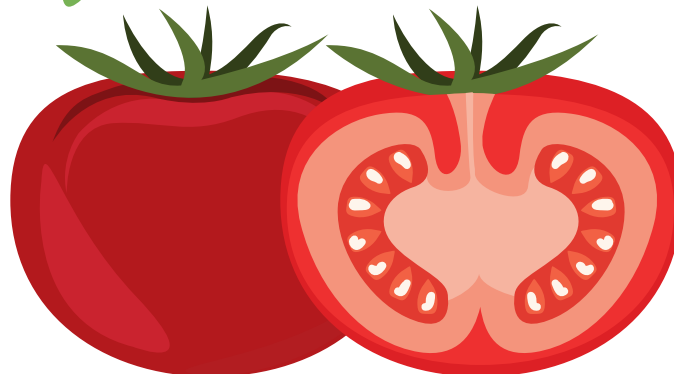

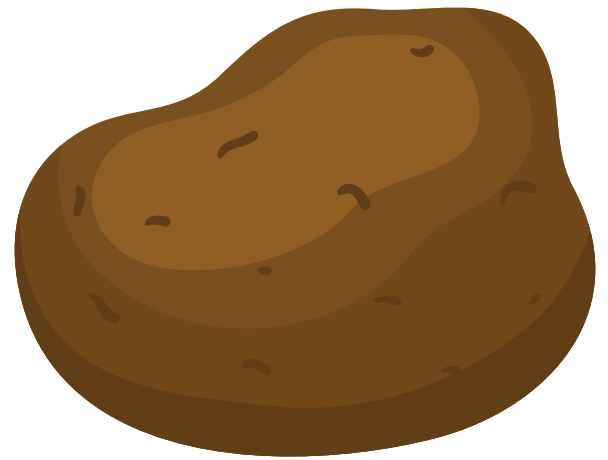

Meet Andre!

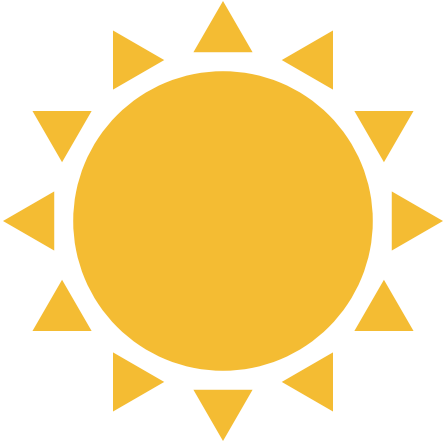

Hi everyone! My name is Andre, and I am an agriculturalist. An agriculturalist is someone who knows all about crops. Crops are plants, like corn or potatoes.

Take a Class Vote!

If you were an
agriculturalist,
would you rather
grow corn,
potatoes, or
tomatoes?

Planting Crops

I can only plant crops when there is daylight. Daylight means that it is light outside. When there is daylight, I can see the ground to plant crops! When there isn't daylight, I cannot see the ground.

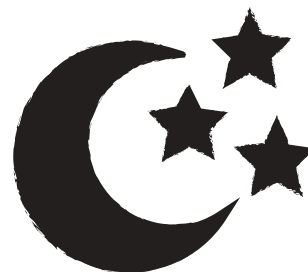

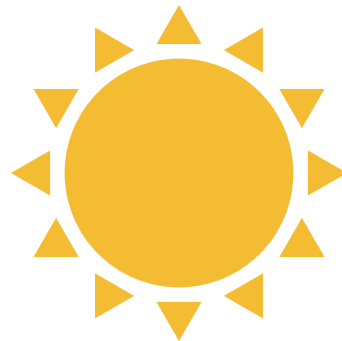

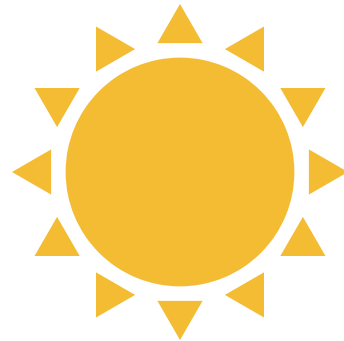

Planting Crops

This year, I am planting crops in the winter and summer. I need to know when the sun is out in winter and summer.

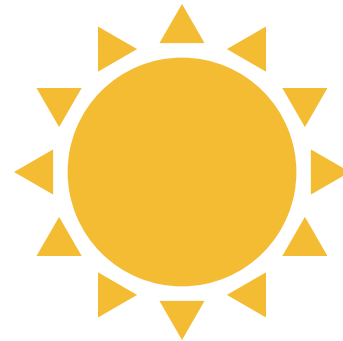

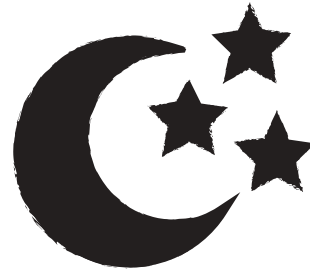

Sun in the Summer

In summer, the sun is out when I wake up in the morning. The sun is also out when I eat lunch and play soccer in the afternoon. The sun is not out when I go to bed and sleep.

Sun in the Winter

In the winter, the sun is not out when I wake up in the morning. The sun is out at lunch. The sun is not out in the afternoon when I play soccer. The sun is not out when I go to bed and sleep.

What I Learned

In the summer, I can plant my crops in the morning or afternoon. This is because the sun is out at these times. In the winter, I can only plant my crops around lunch time!
