

# Teacher Set Up for Stations

## Setting Up Station and Coin Collecting

- Students will have the opportunity to go to 3 different stations during step 2 of the game they play. Choose 3 different areas around your room for each station
- For Station #1, hang up the sign from [Handout: Station #1 Sign](#). Then, put a small container in front or next to the sign. This container is where students will put their coins.
- Set up the other 2 stations with their station signs ([Handouts: Station #2-3 Signs](#)) and containers.

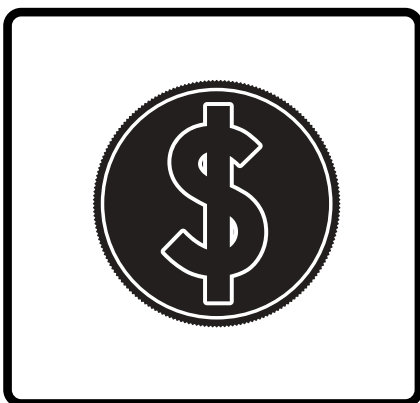

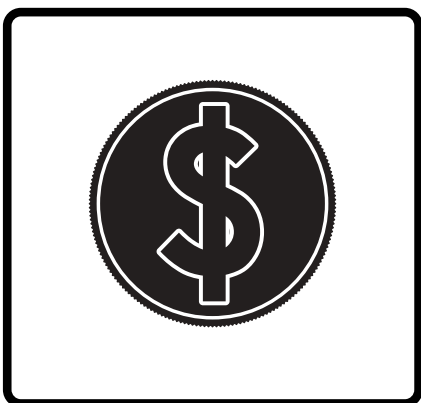

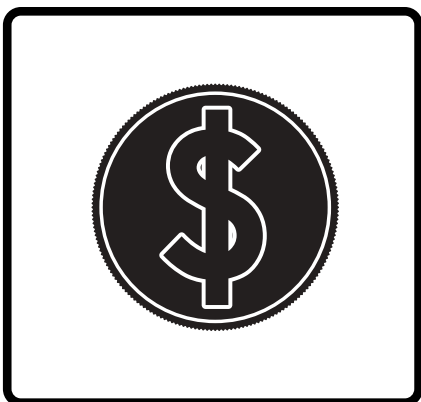

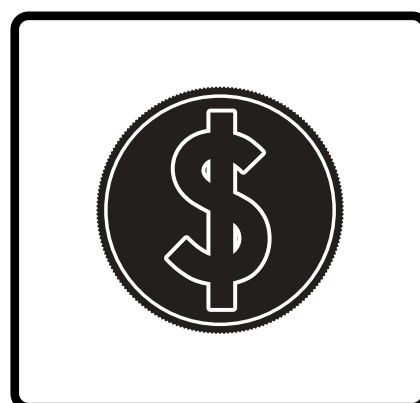

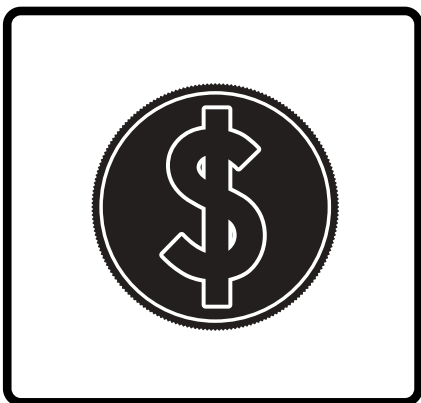

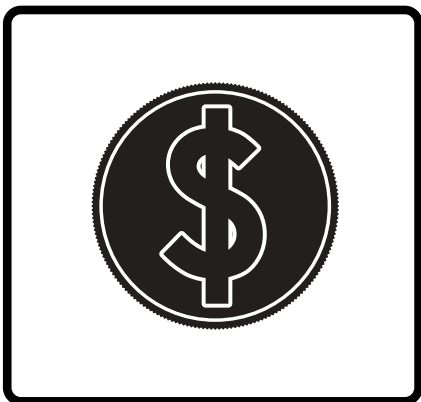

## Materials for Stations

- Each station has a different activity for the students to do.
- For Station #1, print out copies of [Handout: Aquarium Color Sheet](#). Print enough copies for each of your students to color.
- For Station # 2, put out art and building supplies for students to create a 3D fish. Print out [Handout: Fish Inspiration](#) to give the students suggestions for fish they can build.
- For Station #3, put out play-doh or clay for students to create an octopus.

## Price of Stations

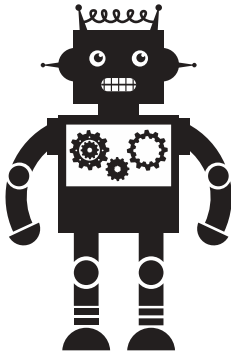

- Explain to students that each station costs a different amount of coins. Students are able to keep going back to stations, as long as they have enough coins.
- Station #1 is 2 coins, Station #2 is 4 coins, and Station #3 is 5 coins.
- Remind students to put the correct number of coins in the container before they start working at a station.
- When students are out of coins, they can go back to their desks and wait for the other students.

# Coins

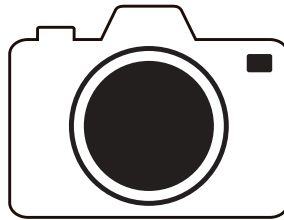

# Steps to Play the Game

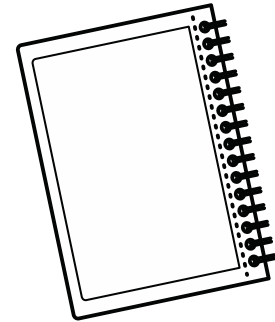

**Step 1: Choose which item you want to save money to buy for your job.**

**Underwater robot**  
8 coins

**Underwater camera**  
5 coins
