Teacher Key

1. Explain the term "early human migration."

Thousands of years ago, human ancestors moved out of Africa to other parts of the world, including Europe, Asia, and South America.

2. How can scientists use DNA to learn about early humans?

DNA is found in bones and other fossils. Scientists can use DNA to learn about the shapes and sizes of early humans' bodies, what they ate, and even where they moved to.

3. Explain 1 reason why early humans may have migrated from one location to another.

Drought, lack of food, fighting with other groups of humans.
