

Antarctic Explorer

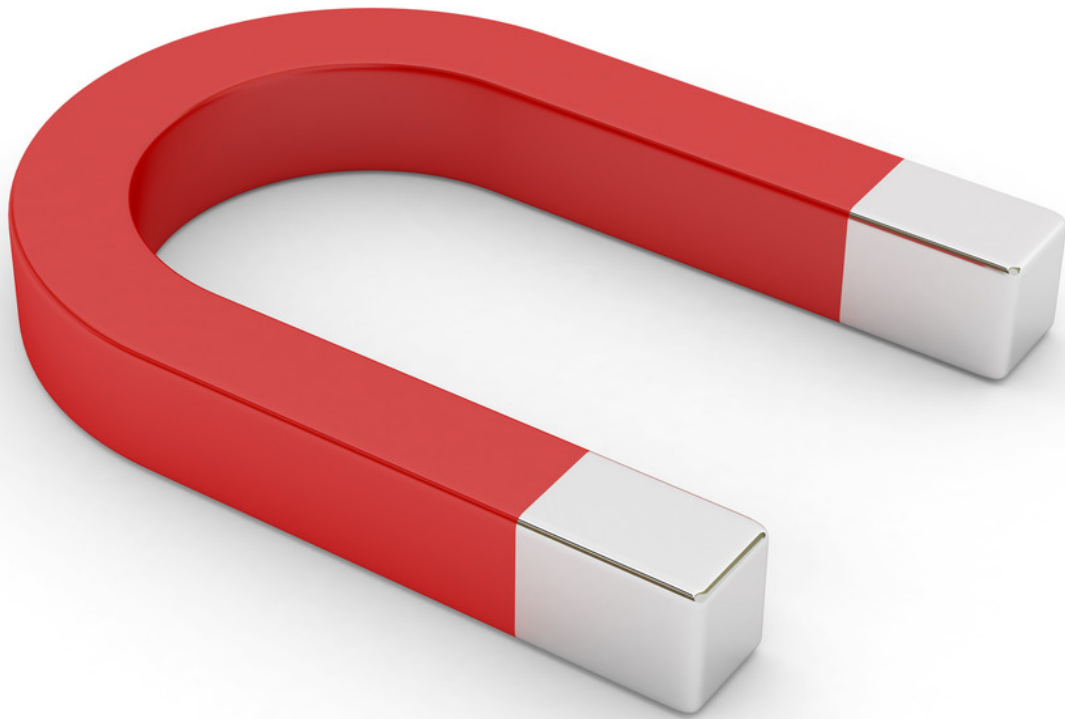

**Someone who studies and explore
Antarctica.**

Lesson: Testing Magnets

Magnet

A rock or piece of metal that attracts other pieces of metal.

Meteorites

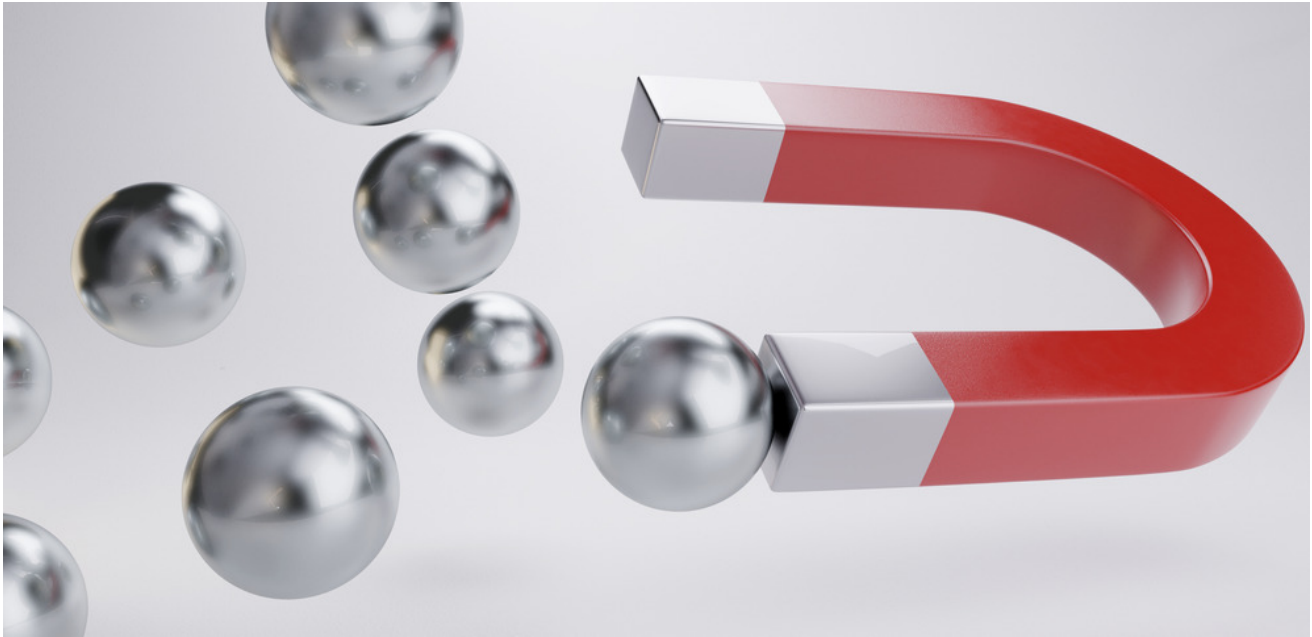

A solid piece of debris from an object, such as a comet, asteroid, or meteoroid, that originates in outer space and falls to the Earth.

Magnetic Domain

A spot in a material where atoms spin in the same direction.

Poles

The ends of a magnet. There is a “north” pole and a “south” pole. The magnets are strongest at the poles.
