

# Ophthalmologists

Ophthalmologists are doctors that study a person's eyes.

# Parts of the Eye

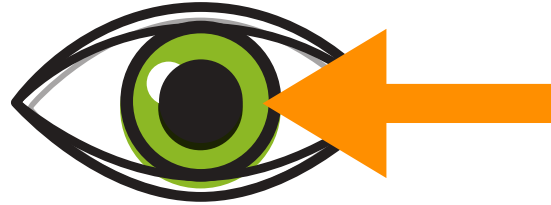

- Iris: The colored part of the eye. The iris can control how big or little the pupil is.
- Pupil: The black center part of the eye. The pupil lets light get into the eye.
- Sclera: The white part around the iris.
- Eyelids: The flaps of skin that can close to cover the eye.

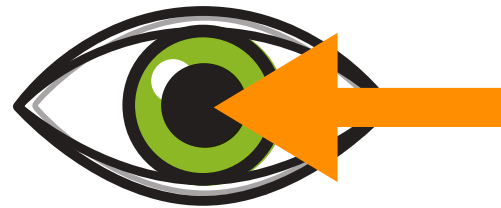

## Steps to Build an Eye

Build an eye with all the parts!

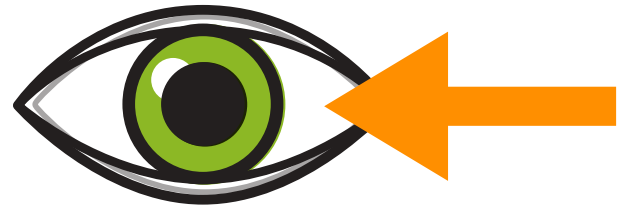

- First build the iris.

- Next, build the pupil.

- Then, build the sclera.

- Lastly, build the eyelids.

## Glasses and Contacts

Both glasses and contact lenses help people see better. Glasses are worn on a person's face. Contacts sit on a person's eye.
