

Fashion Designers

Fashion designers create new clothing for people to wear.

Technology in Clothes

Fashion designers are making clothing that has technology! The clothing will have a special piece of technology called a sensor. The sensor tracks how hot or cold the air is outside. In the pictures, arrows show where the sensors are on the clothing!

My Coat

Design a coat with a sensor on it!

Prototype of a Sensor

A prototype is a small, pretend version of something that is being built. Fashion designers build prototypes first so they can see what the sensor will look like on an item of clothing.

Use art supplies and building materials to create a prototype of your sensor. You can even try to attach it to a real coat!
