

# What is Renewable Energy?-Teacher Key

1. Algae is a renewable source because more algae can grow in the water.
2. Coal is a non-renewable source because there is a limited amount on Earth.
3. When coal is used to create energy, it releases a lot of pollution into the air. The pollution is bad for humans and animals. The pollution is also bad for the environment.
4. Environmentalists want to find new types of renewable energy sources. That way, we won't run out of energy sources. We also will have new types of sources that won't release pollution into the air.
