Introduction to Pictographs

Meet Antonya! Antonya is a park ranger. Park rangers protect parks and the animals that live in them. Park rangers also help count how many animals live in an area of the park.

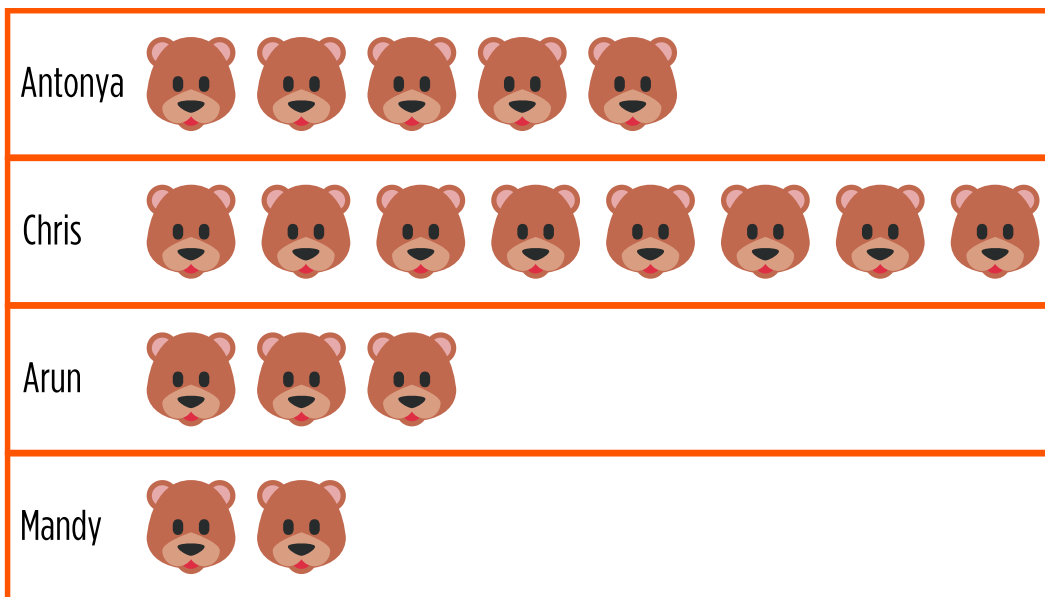

Right now, Antonya is working with 3 other park rangers! They spent the last month counting the number of bears that they saw in the park. Now, they are creating a pictograph to show how many bears they counted. A pictograph is a type of graph.

On the next page is Antonya's pictograph. The pictograph shows how many bears each park ranger saw this month. Each bear in the pictograph stands for one bear that a park ranger saw in real life. Help Antonya answer the questions about the pictograph.

Name: _____

Introduction to Pictographs

 = 1 bear

1. Who saw the most bears? _____
